RESEARCH INTERESTS

Econometrics, Causal Inference, Nonparametric and Semiparametric Methods, Computational Econometrics

EDUCATION

Columbia University	New York, NY
Ph.D. in Economics	2021–2027 (expected)
M.Phil. in Economics	2024
M.A. in Economics	2023
Seoul National University	Seoul, Korea
M.A. in Economics	2019–2021
B.A. in Economics, B.S. in Mathematics, <i>summa cum laude</i>	2012–2016

WORKING PAPERS

“Judge IV Designs with Multiple Treatments and Instruments” Job Market Paper.

Abstract. This paper proposes a two-stage procedure for judge instrumental variable (IV) designs with multiple treatments, estimating the effect of one treatment against another on the cases that could have received either, the margin between the two. The first stage is an unordered treatment assignment model whose returns are the observed case characteristics weighted in the judge’s own way, plus an unobserved component. The judge weights and the propensity for each treatment are identified without specifying the distribution of the unobserved components. We estimate the weights and the propensity jointly by sieve maximum likelihood, which is semiparametrically efficient for the weights. The estimates construct the regressors of the second stage, where the mean outcome a treatment would produce at a margin is recovered directly from a single regression among the cases that received it and its derivative in the propensity. Empirically calibrated Monte Carlo experiments show that the first stage is nearly as precise as a correctly specified parametric benchmark and remains accurate where that benchmark fails. Revisiting a judge IV study of recidivism in Virginia court records, we find that a noncarceral conviction raises both noncarceral and carceral reoffending by less than has been reported, while incarceration raises reoffending by at least as much as a noncarceral conviction does and almost entirely in carceral form, a pattern that holds broadly across case characteristics.

HONORS AND AWARDS

2026	Dissertation Fellowship, Department of Economics, Columbia University
2024	Vickrey Award for Best Third-Year Paper–Runner Up, Department of Economics, Columbia University
2023	Young-Iob Chung Fellowship, Columbia University
2016	Presidential Award, Seoul National University
2014	Gold Prize (Top 5%), University Student Mathematics Competition (Math Majors Section), Korean Mathematical Society

PRESENTATIONS

2025	“Identification and Inference in General Bunching Designs,” Econometric Society World Congress, Seoul
